

Serious Project Management. Wired to Your ERP.

ProjectManager gives project-based teams a shared place to plan work, schedule people and see real capacity — Gantt, workload, timesheet and the collaboration that keeps everyone working from the same plan.

Connect it to Acumatica and the finance side keeps pace on its own: approved time arrives ready to bill, and committed and actual costs come back onto the tasks that created them.

Optimize Resources with a Two-Way Integration Between Project & ERP Systems

Acumatica handles project accounting, billing and financial control. ProjectManager handles the planning, scheduling and resourcing that produce those numbers — and it's bundled with Professional Services Edition. Approved time goes to Acumatica ready to bill; real costs come back onto the tasks that generated them.

- ✓ Reduce duplicate setup by creating projects in either system and syncing key info.
- ✓ Keep teams aligned by sharing task lists, progress, dates and ownership between systems.
- ✓ Streamline time tracking by linking resources to employees and auto-sending timesheets as Time Activities.
- ✓ Give PMs better cost visibility with actual/committed costs and cost codes from Acumatica.

ProjectManager Features

Portfolio Management
Gain real-time visibility into all projects, enabling better strategic decision-making.

Collaboration & File Sharing
Share updates, files and reports in one platform to keep everyone aligned.

Project Planning & Scheduling
Visualize timelines, plan scenarios, map dependencies, track progress and collaborate on an award-winning Gantt chart.

Reporting & Analytics
Generate real-time reports on resource allocation and availability, time spent and project progress for complete visibility.

Resource Management & Capacity Planning
Assign tasks, track hours, adjust workloads and plan for real-time availability.

Task Management
Break down projects into manageable tasks, assign responsibilities and track progress.

Time Tracking & Timesheets
Log billable hours and task progress with Acumatica syncing for accurate reporting and payroll.

Workflow Automation
Design & automate custom workflows and approval processes to boost efficiency and visibility.

Budgeting & Cost Management
Track labor, equipment and materials in real time with financial data that's always up to date.

RAID Logs
Manage risks, issues, changes and more alongside projects and collaborate on solutions with your team.

AI Project Insights
Get AI insights into project plans to enhance resource management, risk analysis and task execution.
